

Crosstabs
University of Massachusetts Amherst/WCVB
December 2021 National Poll

Field Dates:	December 14 – December 20, 2021
Sample:	1,000 Respondents
Margin of Error:	3.1%

YouGov interviewed 1036 respondents who were then matched down to a sample of 1,000 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from the full 2019 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 and 2020 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.

SYSTEMIC RACISM (% AGREE)

Category		White people in the U.S. have certain advantages because of the color of their skin.	Racial problems in the U.S. are rare, isolated situations.	I am angry that racism exists.

GREAT REPLACEMENT (% AGREE)

Category		The growth in the number of immigrants in the country means that America is in danger of losing its culture and identity.	The Democratic Party is trying to replace the current electorate with voters from poorer countries around the world.	The growth in the size of minority communities in the country will likely result in the declining influence of white Americans.
