

## Crosstabs

August 2020 University of Massachusetts Amherst/WCVB Poll of Massachusetts  
Registered Voters

<b>Field Dates:</b>	July 31– August 7, 2020
<b>Sample:</b>	500 Registered Voters in Massachusetts 199 Likely Democratic Senate Primary Voters (Democrats) 163 Likely Democratic Senate Primary Voters (Independents)
<b>Margin of Error:</b>	5.9% for All Registered Voters 7.0% for Likely Democratic Primary Election Voters

YouGov interviewed 563 respondents who were then matched down to a sample of 500 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from the Massachusetts registered voter portion of the 2018 Current Population Survey (CPS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on the age x gender stratification of Democratic Primary voters from the Massachusetts voter file and the education distribution of the February 2020 UMass Poll to produce the final weight.
